

## BQ2945xy Overvoltage Protection For 2-Series and 3-Series Cell Li-Ion Batteries

### 1 Features

- 2-series and 3-series cell overvoltage monitor for secondary protection
- Fixed programmable delay timer
- Fixed OVP threshold
  - Available range from 3.85 V to 4.6 V
- Fixed OVP delay option: 4 s or 6.5 s
- High-accuracy overvoltage protection:  $\pm 10$  mV
- Low power consumption  $I_{CC} \approx 1 \mu\text{A}$  ( $V_{\text{CELL(ALL)}} < V_{\text{PROTECT}}$ )
- Low leakage current per cell input  $< 100$  nA
- Small package footprint
  - 6-pin SON

### 2 Applications

- Second-Level Protection in Li-Ion Battery Packs in:
  - Tablets
  - Slates
  - Power Tools
  - Notebook Computers
  - Portable Equipment and Instrumentation

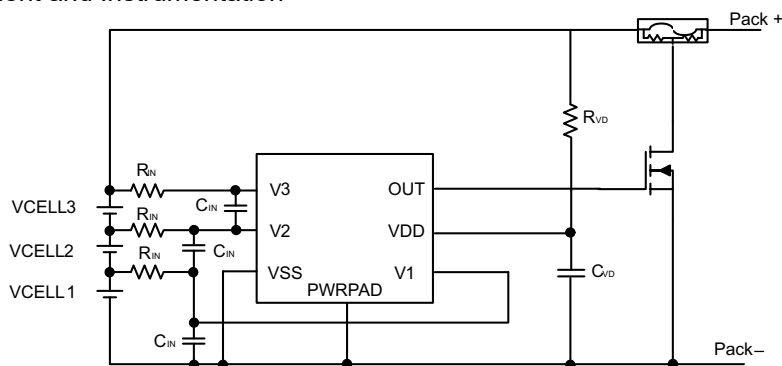

### 3 Description

The BQ2945xy family of products is a secondary-level voltage monitor and protector for Li-ion battery pack systems. Each cell is monitored independently for an overvoltage condition. Based on the configuration, an output is triggered after a fixed delay if any of the two or three cells has an overvoltage condition. This output is triggered into a high state after an overvoltage condition satisfies the specified delay timer.

## 7 Specifications

### 7.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)<sup>(1) (2)</sup>

		MIN	MAX	UNIT
Supply voltage	VDD–VSS	–0.3	30	V
Input voltage	V1–VSS or V2–VSS or V3–VSS+	–0.3	30	V
	V3–V2 or V2–V1	–0.3	8	V
Output voltage	OUT–VSS	–0.3	30	V
Continuous total power dissipation, P <sub>TOT</sub>		See <a href="#">Section 7.4</a>		
Lead temperature (soldering, 10 s), T <sub>SOLDER</sub>			300	°C
Storage temperature, T <sub>stg</sub>		–65	150	°C

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) See [Figure 8-3](#).

### 7.2 ESD Ratings

		VALUE	UNIT
V <sub>(ESD)</sub> Electrostatic discharge	Human body model (HBM), per ANSI/ESDA/JEDEC JS-001 <sup>(1)</sup>	±2000	V
	Charged device model (CDM), per JEDEC specification JESD22-C101 <sup>(2)</sup>	±500	

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
- (2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

### 7.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

		MIN	MAX	UNIT
Supply voltage, V <sub>DD</sub> <sup>(1)</sup>		3	25	V
Input voltage	V3–V2 or V2–V1 or V1–VSS	0	5	V
Operating ambient temperature, T <sub>A</sub>		–40	110	°C

- (1) See [Section 9.2](#).

### 7.4 Thermal Information

THERMAL METRIC <sup>(1)</sup>		BQ2945xy	UNIT
		DRV (SON)	
		6 PINS	
R <sub>θJA</sub>	Junction-to-ambient thermal resistance	186.4	°C/W
R <sub>θJC(top)</sub>	Junction-to-case(top) thermal resistance	90.4	°C/W
R <sub>θJB</sub>	Junction-to-board thermal resistance	110.7	°C/W
Ψ <sub>JT</sub>	Junction-to-top characterization parameter	96.7	°C/W
Ψ <sub>JB</sub>	Junction-to-board characterization parameter	90	°C/W
R <sub>θJC(bot)</sub>	Junction-to-case(bottom) thermal resistance	N/A	°C/W

- (1) For more information about traditional and new thermal metrics, see the [Semiconductor and IC Package Thermal Metrics](#) application report.

## 7.5 Electrical Characteristics

Typical values stated where  $T_A = 25^\circ\text{C}$  and  $V_{DD} = 10.8\text{ V}$ , MIN/MAX values stated where  $T_A = -40^\circ\text{C}$  to  $+110^\circ\text{C}$  and  $V_{DD} = 3\text{ V}$  to  $15\text{ V}$  (unless otherwise noted).

(1) Specified by design. Not 100% tested in production.

## 7.6 Typical Characteristics

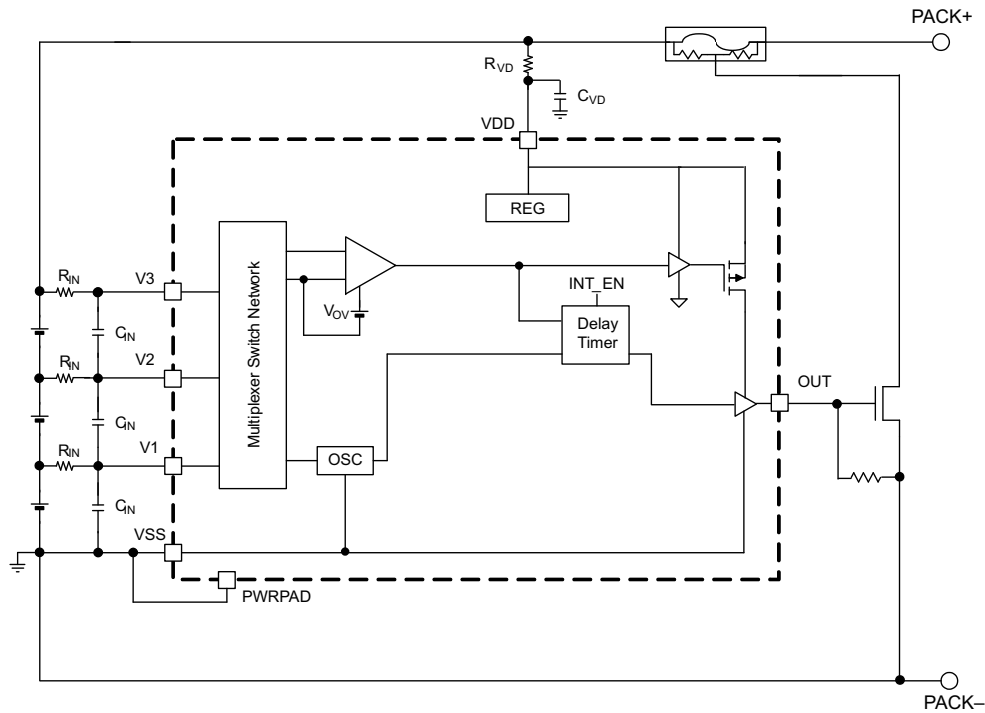

Figure 7-5. Output Voltage vs Output Current

## 8 Detailed Description

### 8.1 Overview

The BQ2945xy is a second-level overvoltage (OV) protector. Each cell is monitored independently by comparing the actual cell voltage to a protection voltage threshold,  $V_{OV}$ . The protection threshold is preprogrammed at the factory with a range from 3.85 V to 4.65 V.

### 8.2 Functional Block Diagram

Copyright © 2017, Texas Instruments Incorporated

### 8.3 Feature Description

The voltage sensing for each cell is done independently using a multiplexer. The method of overvoltage detection is comparing the voltage to an overvoltage protection voltage  $V_{OV}$ . Once the voltage exceeds the programmed fixed value, the delay timer circuit is activated. This delay ( $t_{DELAY}$ ) is fixed for either a 4-s or 6.5-s delay. When these conditions are satisfied, the OUT terminal is transitioned to a high level. This output (OUT) is released to a low condition if *all* of the cell inputs ( $V_x$ ) are below the OVP threshold minus the  $V_{hys}$ .

**Figure 8-1. Timing for Overvoltage Sensing**

### 8.3.1 Sense Positive Input for VX

This is an input to sense each single battery cell voltage. A series resistor and a capacitor across the cell for each input is required for noise filtering and stable voltage monitoring.

### 8.3.2 Output Drive, OUT

The gate of an external N-channel MOSFET is connected to this terminal. This output transitions to a high level when an overvoltage condition is detected and after the programmed delay timer. OUT will reset to a low level if the cell voltage falls below the  $V_{OV}$  threshold before the fixed delay timer expires.

### 8.3.3 Supply Input, VDD

This terminal is the unregulated input power source for the IC. A series resistor is connected to limit the current, and a capacitor is connected to ground for noise filtering.

### 8.3.4 Thermal Pad, PWRPAD

For correct operation, the power pad (PWRPAD) is connected to the  $V_{SS}$  terminal on the PCB.

## 8.4 Device Functional Modes

### 8.4.1 NORMAL Mode

When all of the cell voltages are below the overvoltage threshold,  $V_{OV}$ , the device operates in NORMAL mode. The device monitors the differential cell voltages connected across  $(V1-VSS)$ ,  $(V2-V1)$  and  $(V3-V2)$ . The OUT pin is inactive in this mode.

### 8.4.2 OVERVOLTAGE Mode

OVERVOLTAGE mode is detected if any of the cell voltages exceeds the overvoltage threshold,  $V_{OV}$  for the configured OV delay time,  $t_{DELAY}$ . The OUT pin will pull high internally. An external FET then turns on, shorting the fuse to ground, which allows the battery or charger power to blow the fuse. When all of the cell voltages fall below  $(V_{OV}-V_{HYS})$ , the device returns to NORMAL mode.

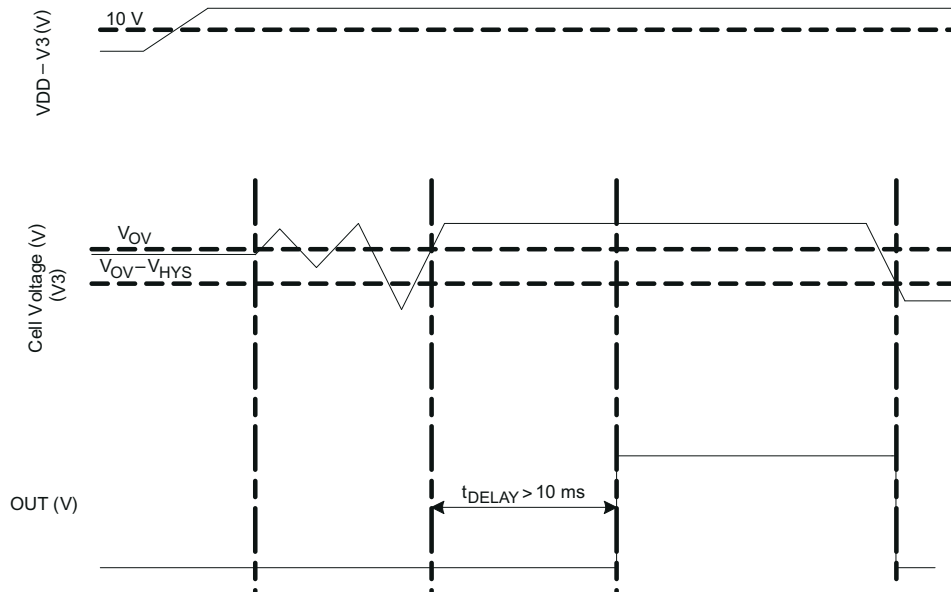

### 8.4.3 Customer Test Mode

Customer Test Mode (CTM) helps to reduce test time for checking the overvoltage delay timer parameter once the circuit is implemented in the battery pack. To enter CTM, VDD should be set to at least 10 V higher than V3 (see Figure 8-2). The delay timer is greater than 10 ms, but considerably shorter than the timer delay in normal operation. To exit CTM, remove the VDD to VC3 voltage differential of 10 V so that the decrease in this value automatically causes an exit.

**CAUTION**

Avoid exceeding any Absolute Maximum Voltages on any pins when placing the part into CTM. Also avoid exceeding Absolute Maximum Voltages for the individual cell voltages (V3–V2), (V2–V1), and (V1–VSS). Stressing the pins beyond the rated limits may cause permanent damage to the device.

Figure 8-2 shows the timing for CTM.

**Figure 8-2. Timing for Customer Test Mode**

Figure 8-3 shows the measurement for current consumption for the product for both VDD and Vx.

**Figure 8-3. Configuration for IC Current Consumption Test**

## Application and Implementation

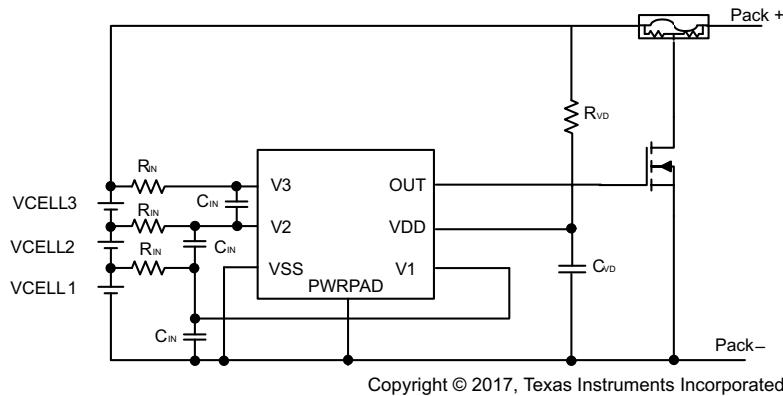

### Note

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

### 9.1 Application Information

The BQ2945xy devices are a family of second-level protectors used for overvoltage protection of the battery pack in the application. The device, when configuring the OUT pin with active high, drives a NMOS FET that connects the fuse to ground in the event of a fault condition. This provides a shorted path to use the battery or charger power to blow the fuse and cut the power path.

### 9.2 Typical Application

**Figure 9-1. Application Configuration Schematic**

#### 9.2.1 Design Requirements

Changes to the ranges stated in [Table 9-1](#) will impact the accuracy of the cell measurements. [Figure 9-1](#) shows each external component.

**Table 9-1. Parameters**

PARAMETER	EXTERNAL COMPONENT	MIN	TYP	MAX	UNIT
Voltage monitor filter resistance	R <sub>IN</sub>	100	1000	4700	Ω
Voltage monitor filter capacitance	C <sub>IN</sub>	0.1		1	μF
Supply voltage filter resistance	R <sub>VD</sub>	100		1K	Ω
Supply voltage filter capacitance	C <sub>VD</sub>		0.1		μF

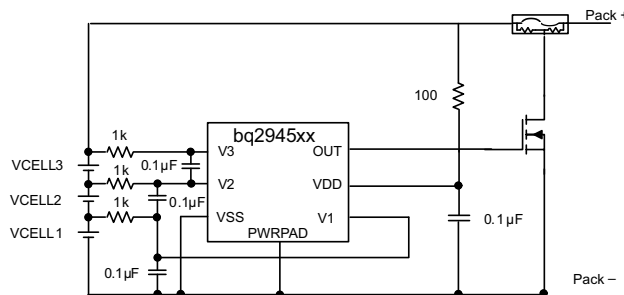

#### 9.2.2 Detailed Design Procedure

1. Determine the overvoltage threshold and delay time. Select the proper device from the table in [Section 5](#), or contact TI for a different configuration.
2. Determine the number of cell in series. The device supports 2-S to 3-S cell configuration. For 2-S configuration, V3 pin should be shorted to V2.
3. Follow the application configuration schematic (see [Figure 9-1](#)) to connect the device.

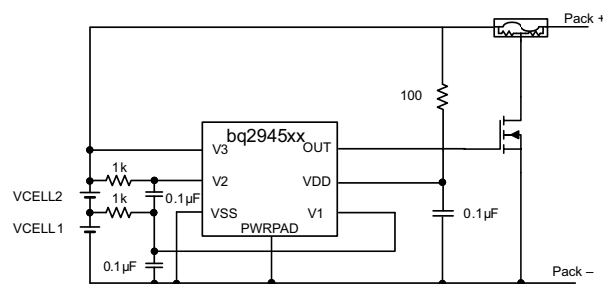

### 9.2.3 Application Curves

### 9.3 System Examples

**Figure 9-4. 3-Series Cell Configuration with Fixed Delay**

**Figure 9-5. 2-Series Cell Configuration with Internal Fixed Delay**

## Power Supply Recommendations

The maximum power of this device is 25 V on VDD.

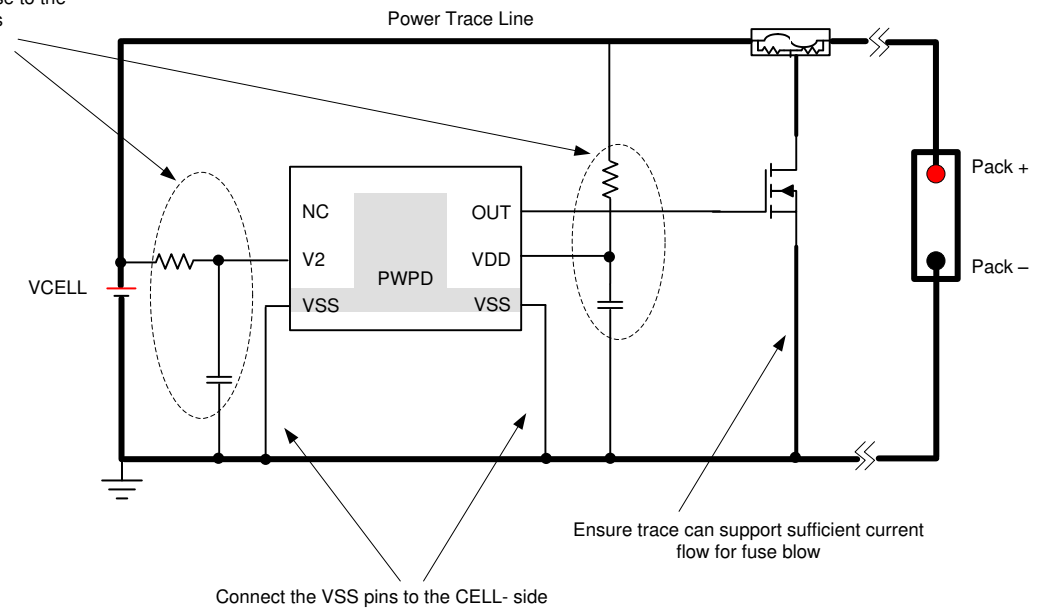

## 9 Layout

### 9.1 Layout Guidelines

- Ensure the RC filters for the V1 and VDD pins are placed as close as possible to the target terminal, reducing the tracing loop area.
- The VSS pin should be routed to the CELL– terminal.
- Ensure the trace connecting the fuse to the gate, source of the NFET to the Pack– is sufficient to withstand the current during a fuse blown event.

### 9.2 Layout Example

Place the RC filters close to the device terminals

**Figure 9-1. Layout Schematic**

## 10 Device and Documentation Support

### 10.1 Device Support

#### 10.1.1 Third-Party Products Disclaimer

TI'S PUBLICATION OF INFORMATION REGARDING THIRD-PARTY PRODUCTS OR SERVICES DOES NOT CONSTITUTE AN ENDORSEMENT REGARDING THE SUITABILITY OF SUCH PRODUCTS OR SERVICES OR A WARRANTY, REPRESENTATION OR ENDORSEMENT OF SUCH PRODUCTS OR SERVICES, EITHER ALONE OR IN COMBINATION WITH ANY TI PRODUCT OR SERVICE.

#### 10.2 Receiving Notification of Documentation Updates

To receive notification of documentation updates, navigate to the device product folder on [ti.com](http://ti.com). Click on *Subscribe to updates* to register and receive a weekly digest of any product information that has changed. For change details, review the revision history included in any revised document.

#### 10.3 Support Resources

[TI E2E™ support forums](#) are an engineer's go-to source for fast, verified answers and design help — straight from the experts. Search existing answers or ask your own question to get the quick design help you need.

Linked content is provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's [Terms of Use](#).

#### 10.4 Trademarks

TI E2E™ is a trademark of Texas Instruments.

All trademarks are the property of their respective owners.

#### 10.5 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

#### 10.6 Glossary

[TI Glossary](#) This glossary lists and explains terms, acronyms, and definitions.

## 11 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

**RoHS Exempt:** TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

**Green:** TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of  $\leq 1000$ ppm threshold. Antimony trioxide based flame retardants must also meet the  $\leq 1000$ ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

## TAPE AND REEL INFORMATION

### QUADRANT ASSIGNMENTS FOR PIN 1 ORIENTATION IN TAPE

\*All dimensions are nominal

Device	Package Type	Package Drawing	Pins	SPQ	Reel Diameter (mm)	Reel Width W1 (mm)	A0 (mm)	B0 (mm)	K0 (mm)	P1 (mm)	W (mm)	Pin1 Quadrant

## GENERIC PACKAGE VIEW

DRV 6

WSON - 0.8 mm max height

PLASTIC SMALL OUTLINE - NO LEAD

Images above are just a representation of the package family, actual package may vary.  
Refer to the product data sheet for package details.

4206925/F

4222173/B 04/2018

NOTES:

1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. The package thermal pad must be soldered to the printed circuit board for thermal and mechanical performance.

# EXAMPLE BOARD LAYOUT

NOTES: (continued)

4. This package is designed to be soldered to a thermal pad on the board. For more information, see Texas Instruments literature number SLUA271 ([www.ti.com/lit/sluea271](http://www.ti.com/lit/sluea271)).
5. Vias are optional depending on application, refer to device data sheet. If some or all are implemented, recommended via locations are shown.

# EXAMPLE STENCIL DESIGN
