

DELIVERY SPECIFICATION

SPEC. No. A-High-h

D A T E : Oct., 2021

To

Non-Controlled Copy

CUSTOMER'S PRODUCT NAME

TDK'S PRODUCT NAME

Multilayer Ceramic Chip Capacitors
 High Voltage Series
 Bulk and Tape packaging 【RoHS compliant】
 CGA6,CGA7,CGA8,CGA9 Type
 C0G,X7R Characteristics

Please return this specification to TDK representatives with your signature.
 If orders are placed without returned specification, please allow us to judge that specification is accepted by your side.

RECEIPT CONFIRMATION

DATE: _____ YEAR _____ MONTH _____ DAY _____

Test conditions in this specification based on AEC-Q200 for automotive application.

TDK Corporation

APPROVED	Person in charge

APPROVED	CHECKED	Person in charge

SCOPE

This delivery specification shall be applied to Multilayer ceramic chip capacitors to be delivered to _____.

PRODUCTION PLACES

Production places defined in this specification shall be TDK Corporation, TDK(Suzhou)Co.,Ltd and TDK Components U.S.A.,Inc.

PRODUCT NAME

The name of the product to be defined in this specifications shall be CGA◇◇◇○○○△△□□□×.

REFERENCE STANDARD

JIS C 5101 – 1 : 2010	Fixed capacitors for use in electronic equipment-Part 1: Generic specification
C 5101 – 21 : 2014	Fixed capacitors for use in electronic equipment-Part21 : Sectional specification : Fixed surface mount multilayer capacitors of ceramic dielectric,Class1
C 5101 – 22 : 2014	Fixed capacitors for use in electronic equipment-Part22 : Sectional specification : Fixed surface mount multilayer capacitors of ceramic dielectric,Class 2
C 0806 – 3 : 2014	Packaging of components for automatic handling - Part 3: Packaging of surface mount components on continuous tapes
JEITA RCR – 2335 C 2014	Safety application guide for fixed ceramic capacitors for use in electronic equipment

10. RECOMMENDATION	

<EXPLANATORY NOTE>

When the mistrust in the spec arises, this specification is given priority. And it will be confirmed by written spec change after conference of both posts involved.

This specification warrants the quality of the ceramic chip capacitor. Capacitors should be evaluated or confirmed a state of mounted on your product.

If the use of the capacitors goes beyond the bounds of this specification, we can not afford to guarantee.

Division	Date	SPEC. No.

1. CODE CONSTRUCTION

(Example)	CGA	6	M	1	C0G	3 A	102	J	T	OOOO
	<u>CGA</u>	<u>8</u>	<u>K</u>	<u>1</u>	<u>X7R</u>	<u>3 D</u>	<u>222</u>	<u>M</u>	<u>T</u>	<u>OOOO</u>
	(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)	(10)

(1) Series

Symbol	Series
CGA	For automotive application

(2) Case size

Case size Symbol	Case size (EIA style)	Dimensions (Unit : mm)			
		L	W	T	B
6	CGA6 (CC1210)	3.20±0.40	2.50±0.30	2.00±0.20	0.20 min.
				2.50±0.30	
7	CGA7 (CC1808)	4.50±0.40	2.00±0.20	0.85±0.15	0.20 min.
				1.10±0.20	
				1.30±0.20	
				1.60±0.20	
8	CGA8 (CC1812)	4.50±0.40	3.20±0.40	2.00±0.20	0.20 min.
				1.30±0.20	
				1.60±0.20	
				2.50±0.30	
9	CGA9 (CC2220)	5.70±0.40	5.00±0.40	2.80±0.30	0.20 min.

*As for each item, please refer to detail page on TDK web.

(3) Thickness

Thickness	Dimension(mm)	Thickness	Dimension(mm)
F	0.85	M	2.00
G	1.10	P	2.50
K	1.30	Q	2.80
L	1.60		

(4) Voltage condition in the life test

* Details are shown in table1 No.16 at 7.PERFORMANCE.

Sign	Condition
1	Rated Voltage

(5) Temperature Characteristics

* Details are shown in table 1 No.6 and No.7 at 7.PERFORMANCE.

(6) Rated Voltage

Symbol	Rated Voltage
3 A	DC 1kV
3 D	DC 2kV
3 F	DC 3kV

(7) Rated Capacitance

Stated in three digits and in units of pico farads (pF).
The first and second digits identify the first and second significant figures of the capacitance, the third digit identifies the multiplier.

(Example)

Symbol	Rated Capacitance
101	100 pF
222	2,200 pF

(8) Capacitance tolerance

Symbol	Tolerance	Capacitance
F	± 1 pF	10pF
J	± 5 %	Over 10pF
K	± 10 %	
M	± 20 %	

(9) Packaging

Symbol	Packaging
B	Bulk
T	Taping

(10) TDK internal code

2. COMBINATION OF RATED CAPACITANCE AND TOLERANCE

Class	Temperature Characteristics	Capacitance tolerance		Rated capacitance
1	C0G	10pF	F (± 1 pF)	10
		Over 10pF	K (± 10 %)	E – 12 series
2	X7R	K (± 10 %) M (± 20 %)		E – 3 series

Capacitance Step in E series

E series	Capacitance Step											
E- 3	1.0				2.2				4.7			
E-12	1.0	1.2	1.5	1.8	2.2	2.7	3.3	3.9	4.7	5.6	6.8	8.2

3. OPERATING TEMPERATURE RANGE

T.C.	Min. operating Temperature	Max. operating Temperature	Reference Temperature
C0G	-55°C	125°C	25°C
X7R	-55°C	125°C	25°C

4. STORING CONDITION AND TERM

Storing temperature	Storing humidity	Storing term
5~40°C	20~70%RH	Within 6 months upon receipt.

5. P.C. BOARD

When mounting on an aluminum substrate, the ceramic chip capacitor. Capacitors are more likely to be affected by heat stress from the substrate.

Please inquire separate specification when mounted on the substrate.

6. INDUSTRIAL WASTE DISPOSAL

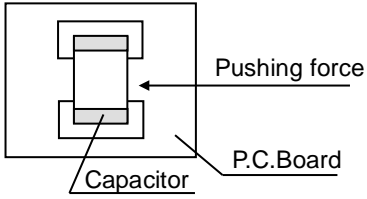

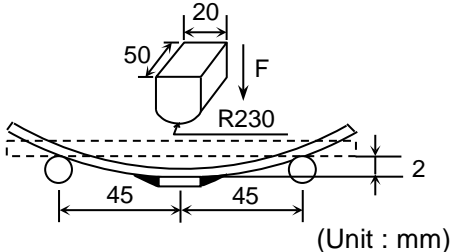

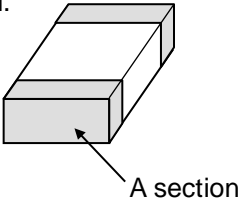

Dispose this product as industrial waste in accordance with the Industrial Waste Law.

7. PERFORMANCE

Table 1

No.	Item	Performance	Test or inspection method												
1	External Appearance	No defects which may affect performance.	Inspect with magnifying glass (3×).												
2	Insulation Resistance	10,000MΩ min.	Measuring voltage : 500V DC Voltage application time : 60s.												
3	Voltage Proof	Withstand test voltage without insulation breakdown or other damage.	Apply voltage : 1.2 × rated voltage Voltage application time : 1s. Charge/discharge current : 50mA or lower												
4	Capacitance	Within the specified tolerance.	<p>《 Class 1 》</p> <table border="1"> <thead> <tr> <th>Capacitance</th> <th>Measuring frequency</th> <th>Measuring voltage</th> </tr> </thead> <tbody> <tr> <td>1000pF and under</td> <td>1MHz±10%</td> <td rowspan="2">0.5~5 Vrms.</td> </tr> <tr> <td>Over 1000pF</td> <td>1kHz±10%</td> </tr> </tbody> </table> <p>《 Class 2 》</p> <table border="1"> <thead> <tr> <th>Measuring frequency</th> <th>Measuring voltage</th> </tr> </thead> <tbody> <tr> <td>1kHz±10%</td> <td>1.0±0.2Vrms</td> </tr> </tbody> </table>	Capacitance	Measuring frequency	Measuring voltage	1000pF and under	1MHz±10%	0.5~5 Vrms. 3	25 ± 2														
4	125 ± 2														

(continued)

No.	Item	Performance	Test or inspection method
8	Robustness of Terminations	No sign of termination coming off, breakage of ceramic, or other abnormal signs.	Reflow solder the capacitors on a P.C.Board shown in Appendix 2. Apply a pushing force gradually at the center of a specimen in a horizontal direction of P.C.board. Pushing force : 17.7N Holding time : 10±1s. 
9	Bending External appearance	No mechanical damage.	Reflow solder the capacitors on a P.C.Board shown in Appendix 1. (1mm is applied for 1.30mm or thinner thickness of Class2 items.) 
10	Solderability	New solder to cover over 75% of termination. 25% may have pin holes or rough spots but not concentrated in one spot. Ceramic surface of A sections shall not be exposed due to melting or shifting of termination material. 	Solder : Sn-3.0Ag-0.5Cu Flux : Isopropyl alcohol (JIS K 8839) Rosin (JIS K 5902) 25% solid solution. Solder temp. : 245±5°C Dwell time : 3±0.3s.(Sn-3.0Ag-0.5Cu) Solder position : Until both terminations are completely soaked.

(continued)

No.	Item		Performance	Test or inspection method		
11	Resistance to solder heat	External appearance	No cracks are allowed and terminations shall be covered at least 60% with new solder.	Solder : Sn-3.0Ag-0.5Cu Flux : Isopropyl alcohol (JIS K 8839) Rosin (JIS K 5902) 25% solid solution. Solder temp. : 260±5°C Dwell time : 10±1s. Solder position : Until both terminations are completely soaked. Pre-heating : Temp. — 110~140°C Time — 30~60s. Leave the capacitors in ambient condition for Class 1 : 6~24h Class 2 : 24±2h before measurement.		
		Capacitance	Characteristics		Change from the value before test	
			Class1		C0G	± 2.5 %
			Class2		X7R	± 7.5 %
		Q (Class1)	Meet the initial spec.			
		D.F. (Class2)	Meet the initial spec.			
		Insulation Resistance	Meet the initial spec.			
Voltage proof	No insulation breakdown or other damage.					
12	Vibration	External appearance	No mechanical damage.	Applied force : 5G max. Frequency : 10~2,000Hz Reciprocating sweep time : 20 min. Cycle : 12 cycles in each 3 mutually perpendicular directions. Reflow solder the capacitors on a P.C.Board shown in Appendix 2 before testing.		
		Capacitance	Characteristics		Change from the value before test	
			Class1		C0G	± 2.5 %
			Class2		X7R	± 7.5 %
		Q (Class1)	Meet the initial spec.			
D.F. (Class2)	Meet the initial spec.					

(continued)

No.	Item		Performance	Test or inspection method															
13	Temperature cycle	External appearance	No mechanical damage.	Expose the capacitors in the condition step1 through step 4 listed in the following table. Temp. cycle : 1,000 cycles <table border="1"> <thead> <tr> <th>Step</th> <th>Temperature(°C)</th> <th>Time (min.)</th> </tr> </thead> <tbody> <tr> <td>1</td> <td>-55 ± 3</td> <td>30 ± 3</td> </tr> <tr> <td>2</td> <td>Ambient Temp.</td> <td>2 ~ 5</td> </tr> <tr> <td>3</td> <td>125 ± 2</td> <td>30 ± 2</td> </tr> <tr> <td>4</td> <td>Ambient Temp.</td> <td>2 ~ 5</td> </tr> </tbody> </table> Leave the capacitors in ambient condition for Class 1 : 6~24h Class 2 : 24±2h before measurement. Reflow solder the capacitors on a P.C.Board shown in Appendix 2 before testing.	Step	Temperature(°C)	Time (min.)	1	-55 ± 3	30 ± 3	2	Ambient Temp.	2 ~ 5	3	125 ± 2	30 ± 2	4	Ambient Temp.	2 ~ 5
		Step	Temperature(°C)		Time (min.)														
		1	-55 ± 3		30 ± 3														
		2	Ambient Temp.		2 ~ 5														
		3	125 ± 2		30 ± 2														
		4	Ambient Temp.		2 ~ 5														
Capacitance	Characteristics		Change from the value before test																
	Class1	C0G	Please contact with our sales representative.																
Class2	X7R																		
Q (Class1)	Meet the initial spec.																		
D.F. (Class2)	Meet the initial spec.																		
Insulation Resistance	Meet the initial spec.																		
Voltage proof	No insulation breakdown or other damage.																		
14	Moisture Resistance (Steady State)	External appearance	No mechanical damage.	Test temp. : 40±2°C Test humidity : 90~95%RH Test time : 500 +24,0h Leave the capacitors in ambient condition for Class 1 : 6~24h Class 2 : 24±2h before measurement. Reflow solder the capacitors on a P.C.Board shown in Appendix2 before testing.															
		Capacitance	Characteristics		Change from the value before test														
			Class1		C0G	Please contact with our sales representative.

D.F. (Class2)	200% of initial spec. max.																		
Insulation Resistance	1,000MΩ min.																		

(continued)

No.	Item		Performance	Test or inspection method		
15	Moisture Resistance	External appearance	No mechanical damage.	Test temp. : 85±2°C Test humidity : 85%RH Applied voltage : 1kV DC Test time : 1,000 +48,0h Charge/discharge current : 50mA or lower Leave the capacitors in ambient condition for Class 1 : 6~24h Class 2 : 24±2h before measurement. Reflow solder the capacitors on a P.C.Board shown in Appendix2 before testing. Initial value setting (only for class 2) Voltage conditioning 《After voltage treat the capacitors under testing temperature and voltage for 1 hour,》 leave the capacitors in ambient condition for 24±2h before measurement. Use this measurement for initial value.		
		Capacitance	Characteristics		Change from the value before test	
			Class1		C0G	Please contact with our sales representative.
			Class2		X7R	
		Q (Class1)	Capacitance		Q	
30pF and over	200 min.					
Under 30pF	100+10/3xC min.					
C : Rated capacitance (pF)						
D.F. (Class2)	200% of initial spec. max.					
Insulation Resistance	500MΩ min.					
16	Life	External appearance	No mechanical damage.	Test temp. : 125±2°C Applied voltage : Please contact with our sales representative. Test time : 1,000 +48,0h Charge/discharge current : 50mA or lower Leave the capacitors in ambient condition for Class 1 : 6~24h Class 2 : 24±2h before measurement. Reflow solder the capacitors on a P.C.Board shown in Appendix2 before testing. Initial value setting (only for class 2) Voltage conditioning 《After voltage treat the capacitors under testing temperature and voltage for 1 hour,》 leave the capacitors in ambient condition for 24±2h before measurement. Use this measurement for initial value.		
		Capacitance	Characteristics		Change from the value before test	
			Class1		C0G	Please contact with our sales representative.
			Class2		X7R	
		Q (Class1)	Capacitance		Q	
30pF and over	350 and over					
10pF and over under 30pF	275+5/2xC min.					
C : Rated capacitance (pF)						
D.F. (Class2)	200% of initial spec. max.					
Insulation Resistance	1,000MΩ min.					

*As for the initial measurement of capacitors (Class2) on number 7,11,12,13 and 14 leave capacitors at 150 0,-10°C for 1 hour and measure the value after leaving capacitors for 24±2h in ambient condition.

(Unit : mm)

Symbol	Dimensions		
	a	b	c
CGA6 (CC1210)	2.2	5.0	2.9
CGA7 (CC1808)	3.5	7.0	2.5
CGA8 (CC1812)	3.5	7.0	3.7
CGA9 (CC2220)	4.5	8.0	5.6

1. Material : Glass Epoxy(As per JIS C6484 GE4)

2. Thickness : 1.6mm

- Copper(Thickness:0.035mm)
- Solder resist

8. INSIDE STRUCTURE AND MATERIAL

No.	NAME	MATERIAL	
		Class1	Class2
1	Dielectric	CaZrO ₃	BaTiO ₃
2	Electrode	Nickel (Ni)	
3	Termination	Copper (Cu)	
4		Nickel (Ni)	
5		Tin (Sn)	

9. PACKAGING

Packaging shall be done to protect the components from the damage during transportation and storing, and a label which has the following information shall be attached.

9.1 Total number of components in a plastic bag for bulk packaging : 1000pcs

9.2 Tape packaging is as per 13. TAPE PACKAGING SPECIFICATION.

- 1) Inspection No.
- 2) TDK P/N
- 3) Customer's P/N
- 4) Quantity

*Composition of Inspection No.

Example F 1 A - 23 - 001
 (a) (b) (c) (d) (e)

- (a) Line code
- (b) Last digit of the year
- (c) Month and A for January and B for February and so on. (Skip I)
- (d) Inspection Date of the month.
- (e) Serial No. of the day

*Composition of new Inspection No.

(Implemented on and after May 1, 2019 in sequence)

Example

I	F	1	E	2	3	A	0	0	1
---	---	---	---	---	---	---	---	---	---

 (a) (b) (c) (d) (e) (f) (g)

- (a) Prefix
- (b) Line code
- (c) Last digit of the year
- (d) Month and A for January and B for February and so on. (Skip I)
- (e) Inspection Date of the month.
- (f) Serial No. of the day(00 ~ ZZ)
- (g) Suffix(00 ~ ZZ)

* It was shifted to the new inspection No. on and after May 2019, but the implementation timing may be different depending on shipment bases.
 Until the shift is completed, either current or new composition of inspection No. will be applied.

10. RECOMMENDATION

It is recommended to provide a slit (about 1mm wide) in the board under the components to improve washing Flux. And please make sure to dry detergent up completely before.

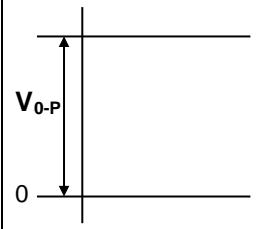

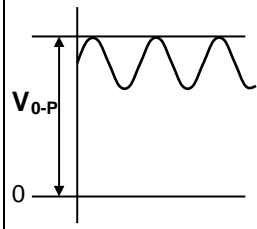

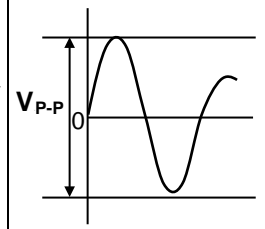

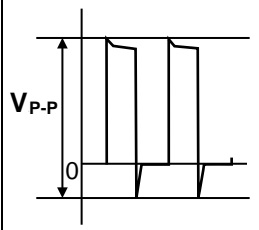

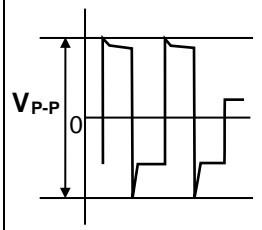

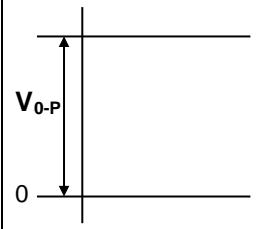

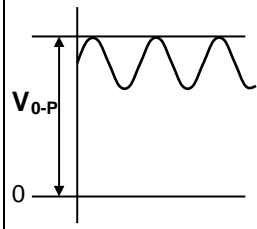

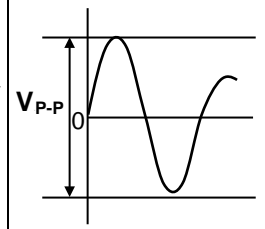

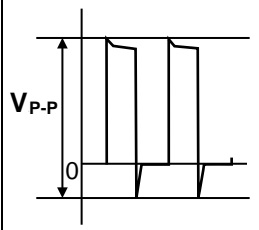

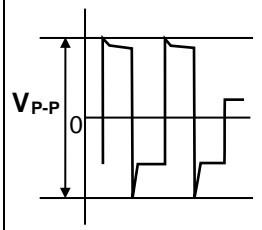

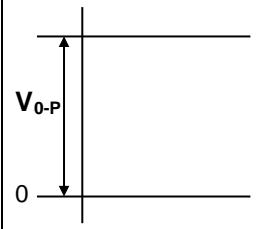

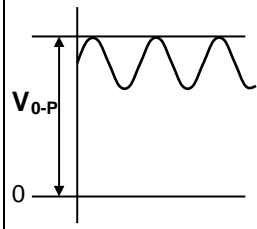

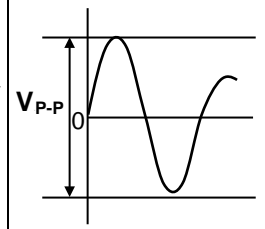

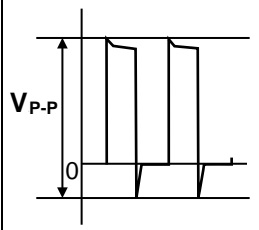

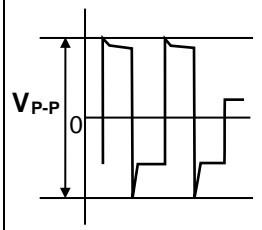

It is recommended to use activated flux (Chlorine content : less than 0.1wt%) such Rosin due to high voltage usage.

11. SOLDERING CONDITION

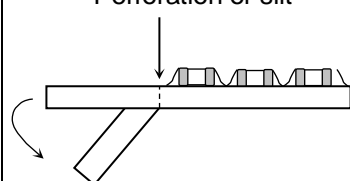

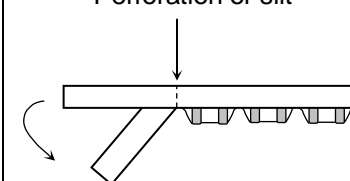

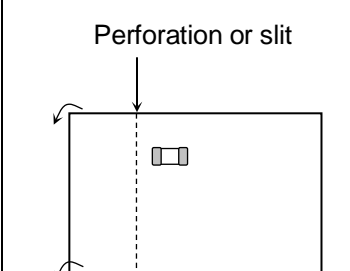

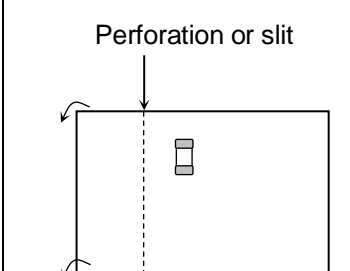

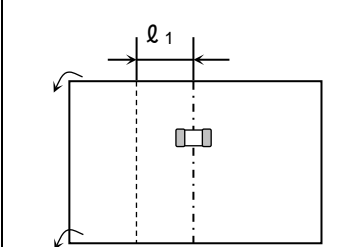

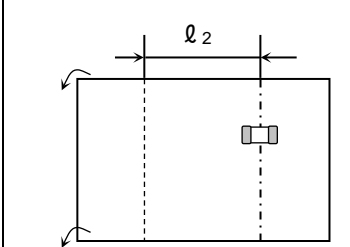

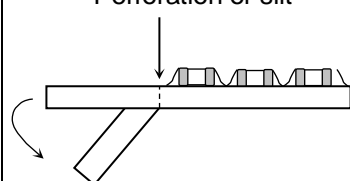

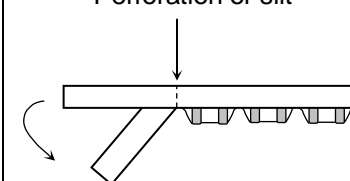

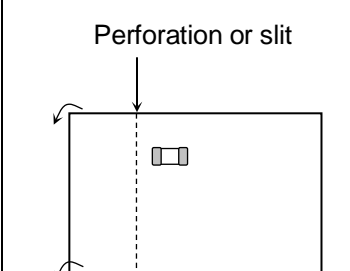

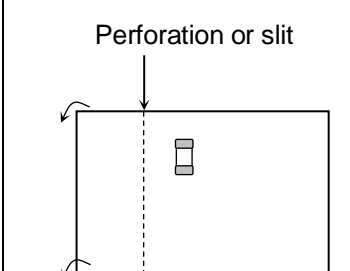

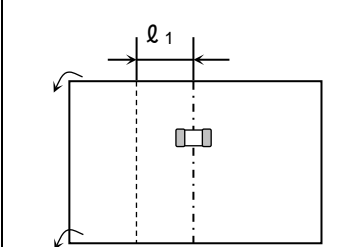

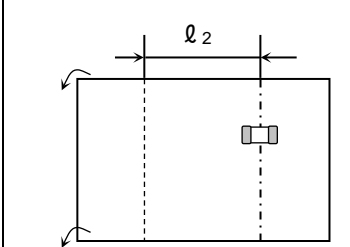

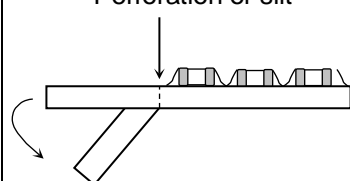

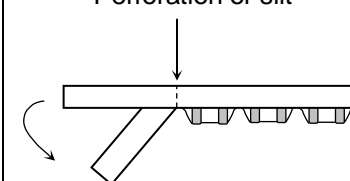

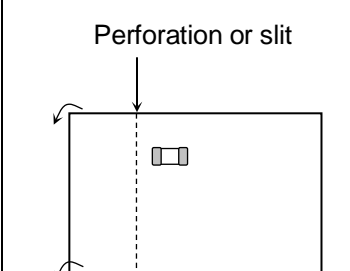

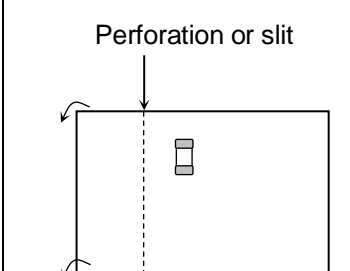

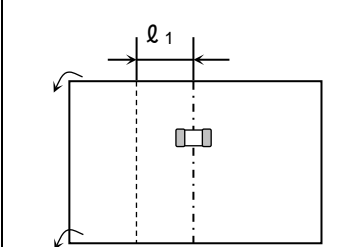

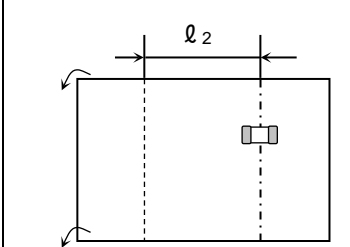

Reflow soldering only.

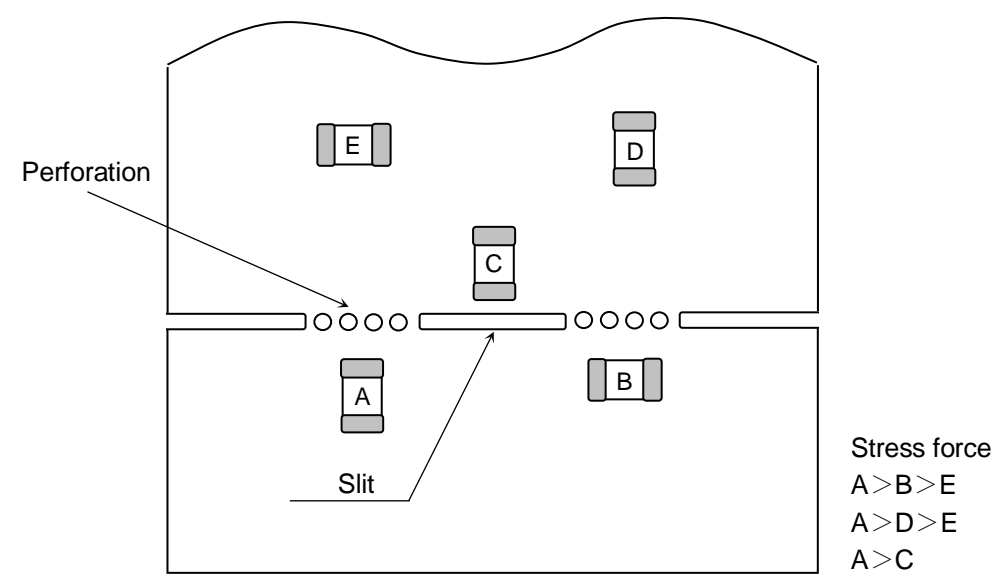

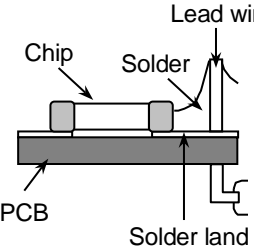

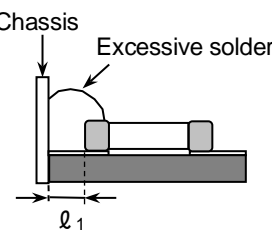

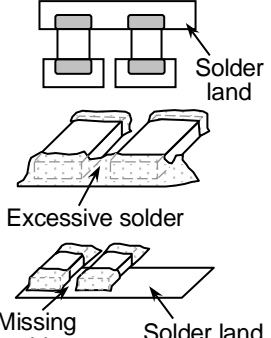

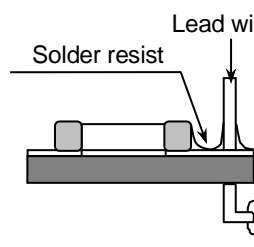

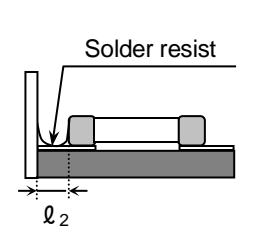

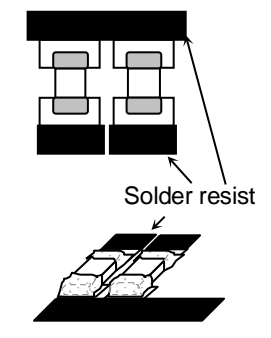

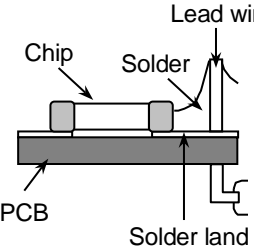

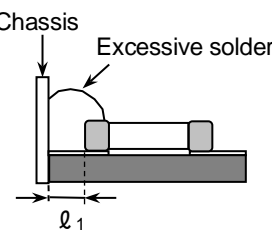

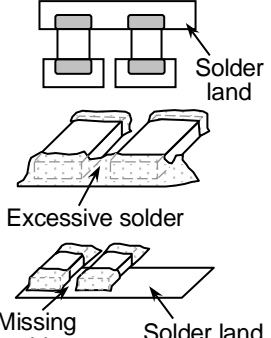

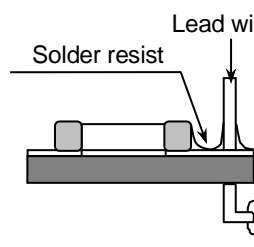

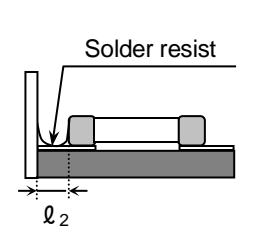

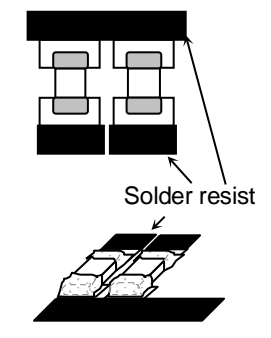

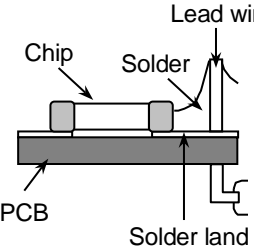

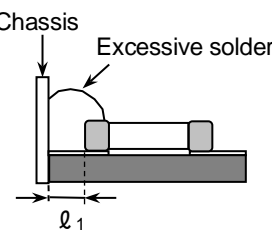

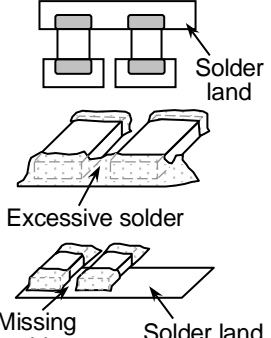

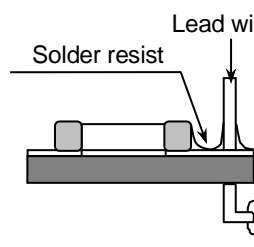

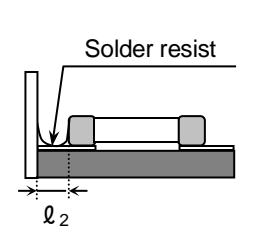

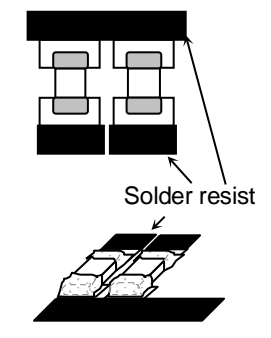

12. CAUTION

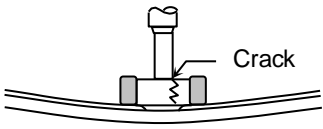

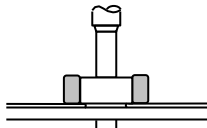

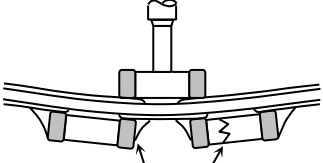

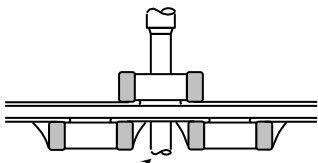

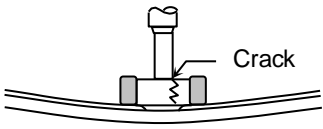

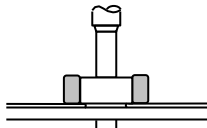

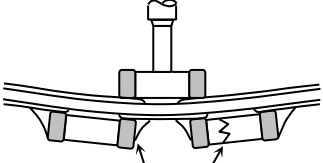

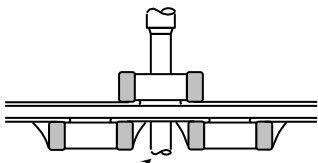

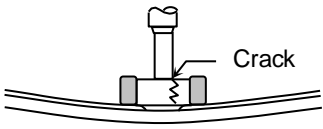

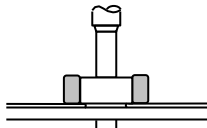

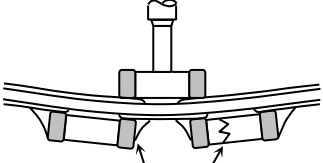

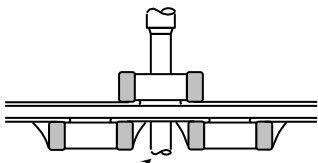

No.	Process	Condition
1	Operating Condition (Storage, Use, Transportation)	<p>1-1. Storage, Use</p> <p>The capacitors must be stored in an ambient temperature of 5 to 40°C with a relative humidity of 20 to 70%RH. JIS C 60721-3-1 Class 1K2 should be followed for the other climatic conditions.</p> <ol style="list-style-type: none"> 1) High temperature and humidity environment may affect a capacitor's solder ability because it accelerates terminal oxidization. They also deteriorate performance of taping and packaging. Therefore, SMD capacitors shall be used within 6 months. For capacitors with terminal electrodes consisting of silver or silver-palladium which tend to become oxidized or sulfurized, use as soon as possible, such as within one month after opening the bag. 2) When capacitors are stored for a longer time period than 6 months, confirm the solderability of the capacitors prior to use. During storage, keep the minimum packaging unit in its original packaging without opening it. Do not deviate from the above temperature and humidity conditions even for a short term. 3) Corrosive gasses in the air or atmosphere may result in deterioration of the reliability, such as poor solderability of the terminal electrodes. Do not store capacitors where they will be exposed to corrosive gas (e.g., hydrogen sulfide, sulfur dioxide, chlorine ammonia etc.) 4) Solderability and electrical performance may deteriorate due to photochemical change in the terminal electrode if stored in direct sunlight, or due to condensation from rapid changes in humidity. The capacitors especially which use resin material must be operated and stored in an environment free of dew condensation, as moisture absorption due to condensation may affect the performance. 5) Refer to JIS C 60721-3-1, class 1K2 for other climate conditions. <p>1-2. Handling in transportation</p> <p>In case of the transportation of the capacitors, the performance of the capacitors may be deteriorated depending on the transportation condition. (Refer to JEITA RCR-2335C 9.2 Handling in transportation)</p>
2	Circuit design  Caution	<p>2-1. Operating temperature</p> <ol style="list-style-type: none"> 1) Upper category temperature (maximum operating temperature) is specified. It is necessary to select a capacitor whose rated temperature is higher than the operating temperature. Also, it is necessary to consider the temperature distribution in the equipment and seasonal temperature variation. 2) Surface temperature including self heating should be below maximum operating temperature. Due to dielectric loss, capacitors will heat itself when AC is applied due to ESR. Especially at high frequencies, please be careful that the heat might be so extreme. Also, even if the surface temperature of the capacitor includes self-heating and is the maximum operating temperature or lower, excessive heating of the capacitor due to self-heating may cause deterioration of the characteristics and reliability of the capacitor. The self-heating temperature rise of the capacitor changes depending on the difference in heat radiation due to the mounting method to the device, the ambient temperature, the cooling method of the device and circuit board material and the design, etc. The load should be contained so that the self-heating temperature rise of the capacitor body in a natural convection environment at an ambient temperature of 25°C remain below 20°C. <p>When using in a high-frequency circuit or a circuit in which a capacitor generates heat, such as when a high-frequency ripple current flows, pay attention to the above precautions. (Note that accurate measurement may not be possible with self-heating measurement when the equipment applies cooling other than natural convection such as a cooling fan.)</p>

No.	Process	Condition														
2	Circuit design  Caution	<p>3) The electrical characteristics of the capacitors will vary depending on the temperature. The capacitors should be selected and designed in taking the temperature into consideration.</p> <p>2-2. When overvoltage is applied Applying overvoltage to a capacitor may cause dielectric breakdown and result in a short circuit. The duration until dielectric breakdown depends on the applied voltage and the ambient temperature.</p> <p>2-3. Operating voltage 1) Operating voltage across the terminals should be below the rated voltage. When AC and DC are super imposed, V_{0-P} must be below the rated voltage. — (1) and (2) AC or pulse with overshooting, V_{P-P} must be below the rated voltage. — (3), (4) and (5) When the voltage is started to apply to the circuit or it is stopped applying, the irregular voltage may be generated for a transit period because of resonance or switching. Be sure to use the capacitors within rated voltage containing these Irregular voltage.</p> <table border="1" data-bbox="469 752 1442 1025"> <thead> <tr> <th data-bbox="469 752 660 797">Voltage</th> <th data-bbox="660 752 919 797">(1) DC voltage</th> <th data-bbox="919 752 1177 797">(2) DC+AC voltage</th> <th data-bbox="1177 752 1442 797">(3) AC voltage</th> </tr> </thead> <tbody> <tr> <td data-bbox="469 797 660 1025">Positional Measurement (Rated voltage)</td> <td data-bbox="660 797 919 1025">  </td> <td data-bbox="919 797 1177 1025">  </td> <td data-bbox="1177 797 1442 1025">  </td> </tr> </tbody> </table> <table border="1" data-bbox="469 1055 1182 1328"> <thead> <tr> <th data-bbox="469 1055 660 1099">Voltage</th> <th data-bbox="660 1055 919 1099">(4) Pulse voltage (A)</th> <th data-bbox="919 1055 1182 1099">(5) Pulse voltage (B)</th> </tr> </thead> <tbody> <tr> <td data-bbox="469 1099 660 1328">Positional Measurement (Rated voltage)</td> <td data-bbox="660 1099 919 1328">  </td> <td data-bbox="919 1099 1182 1328">  </td> </tr> </tbody> </table> <p>2) Even below the rated voltage, if repetitive high frequency AC or pulse is applied, the reliability of the capacitors may be reduced.</p> <p>3) The effective capacitance will vary depending on applied DC and AC voltages. The capacitors should be selected and designed in taking the voltages into consideration.</p> <p>4) Abnormal voltage (surge voltage, static electricity, pulse voltage, etc.) shall not exceed the rated voltage.</p> <p>5) When capacitors are used in a series connection, it is necessary to add a balancing circuit such as voltage dividing resistors in order to avoid an imbalance in the voltage applied to each capacitor.</p> <p>2-4. Frequency When the capacitors (Class 2) are used in AC and/or pulse voltages, the capacitors may vibrate themselves and generate audible sound.</p>	Voltage	(1) DC voltage	(2) DC+AC voltage	(3) AC voltage	Positional Measurement (Rated voltage)				Voltage	(4) Pulse voltage (A)	(5) Pulse voltage (B)	Positional Measurement (Rated voltage)

5	Soldering	<p>5-5. Amount of solder</p> <p>Excessive solder will induce higher tensile force in chip capacitors when temperature changes and it may result in chip cracking. In sufficient solder may detach the capacitors from the P.C.board.</p> <hr/> <div style="display: flex; justify-content: space-between;"> <div data-bbox="496 376 619 443">Excessive solder</div> <div data-bbox="683 353 1093 465">  </div> <div data-bbox="1121 362 1409 452">Higher tensile force in chip capacitors to cause crack</div> </div> <hr/> <div style="display: flex; justify-content: space-between;"> <div data-bbox="496 546 612 577">Adequate</div> <div data-bbox="683 501 1262 613">  </div> </div> <hr/> <div style="display: flex; justify-content: space-between;"> <div data-bbox="496 680 627 748">Insufficient solder</div> <div data-bbox="683 658 1093 770">  </div> <div data-bbox="1121 654 1409 775">Low robustness may cause contact failure or chip capacitors come off the P.C.board.</div> </div> <hr/> <p>5-6. Sn-Zn solder Sn-Zn solder affects product reliability. Please contact TDK in advance when utilize Sn-Zn solder.</p> <p>5-7. Countermeasure for tombstone The misalignment between the mounted positions of the capacitors and the land patterns should be minimized. The tombstone phenomenon may occur especially the capacitors are mounted (in longitudinal direction) in the same direction of the reflow soldering. (Refer to JEITA RCR-2335C Annex A (Informative), Recommendations to prevent the tombstone phenomenon.)</p>

No.	Process	Condition												
6	Solder repairing	<p>Solder repairing is unavoidable, refer to below.</p> <p>6-1.Soldering rework using spot heater Heat stress during rework may possibly be reduced by using a spot heater (also called a “blower”) rather than a soldering iron. It is applied only to adding solder in the case of insufficient solder amount.</p> <p>1) Reworking using a spot heater may suppress the occurrence of cracks in the capacitor compared to using a soldering iron. A spot heater can heat up a capacitor uniformly with a small heat gradient which leads to lower thermal stress caused by quick heating and cooling or localized heating. Moreover, where ultra-small capacitors are mounted close together on a printed circuit board, reworking with a spot heater can eliminate the risk of direct contact between the tip of a soldering iron and a capacitor.</p> <p>2) Rework condition If the blower nozzle of a spot heater is too close to a capacitor, a crack in the capacitor may occur due to heat stress. Below are recommendations for avoiding such an occurrence. Keep more than 5mm between a capacitor and a spot heater nozzle. The blower temperature of the spot heater shall be lower than 400°C. The airflow shall be set as weak as possible. The diameter of the nozzle is recommended to be 2mm(one-outlet type).The size is standard and common. Duration of blowing hot air is recommended to be 30s or less, considering surface area of the capacitor and melting temperature of solder. The angle between the nozzle and the capacitor is recommended to be 45degrees in order to work easily and to avoid partial area heating. As is the case when using a soldering iron, preheating reduces thermal stress on capacitors and improves operating efficiency.</p> <ul style="list-style-type: none"> Recommended rework condition (Consult the component manufactures for details.) <table border="1" data-bbox="507 1120 1414 1482"> <tbody> <tr> <td>Distance from nozzle</td> <td>5mm and over</td> </tr> <tr> <td>Nozzle angle</td> <td>45degrees</td> </tr> <tr> <td>Nozzle temp.</td> <td>400°C and less</td> </tr> <tr> <td>Airflow</td> <td>Set as weak as possible (The airflow shall be the minimum value necessary for solder to melt in the conditions mentioned above.)</td> </tr> <tr> <td>Nozzle diameter</td> <td>φ 2mm (one-outlet type)</td> </tr> <tr> <td>Blowing duration</td> <td>30s and less</td> </tr> </tbody> </table> <ul style="list-style-type: none"> Example of recommended spot heater use  <p>3) Amount of solder should be suitable to form a proper fillet shape. Excess solder causes mechanical and thermal stress on a capacitor and results in cracks. Insufficient solder causes weak adherence of the capacitor to the substrate and may result in detachment of a capacitor and deteriorate reliability of the printed wiring board. See the example of appropriate solder fillet shape for 5-5.Amount of solder.</p>	Distance from nozzle	5mm and over	Nozzle angle	45degrees	Nozzle temp.	400°C and less	Airflow	Set as weak as possible (The airflow shall be the minimum value necessary for solder to melt in the conditions mentioned above.) 7	Cleaning	<p>1) If an unsuitable cleaning fluid is used, flux residue or some foreign articles may stick to chip capacitors surface to deteriorate especially the insulation resistance.</p> <p>2) If cleaning condition is not suitable, it may damage the chip capacitors.</p> <p>2)-1. Insufficient washing</p> <p>(1) Terminal electrodes may corrode by Halogen in the flux.</p> <p>(2) Halogen in the flux may adhere on the surface of capacitors, and lower the insulation resistance.</p> <p>(3) Water soluble flux has higher tendency to have above mentioned problems (1) and (2).</p> <p>2)-2. Excessive washing</p> <p>When ultrasonic cleaning is used, excessively high ultrasonic energy output can affect the connection between the ceramic chip capacitor's body and the terminal electrode. To avoid this, following is the recommended condition.</p> <p style="text-align: center;">Power : 20 W/ ℓ max. Frequency : 40 kHz max. Washing time : 5 minutes max.</p> <p>2)-3. If the cleaning fluid is contaminated, density of Halogen increases, and it may bring the same result as insufficient cleaning.</p>
8	Coating and molding of the P.C.board	<p>1) When the P.C.board is coated, please verify the quality influence on the product.</p> <p>2) Please verify carefully that there is no harmful decomposing or reaction gas emission during curing which may damage the chip capacitors.</p> <p>3) Please verify the curing temperature.</p>
9	Handling after chip mounted  Caution	<p>1) Please pay attention not to bend or distort the P.C.board after soldering in handling otherwise the chip capacitors may crack.</p> <div style="display: flex; justify-content: space-around; align-items: center;"> <div style="text-align: center;"> <p>Bend</p>  </div> <div style="text-align: center;"> <p>Twist</p>  </div> </div>

No.	Process	Condition																
9	Handling after chip mounted  Caution	<p>2) Printed circuit board cropping should not be carried out by hand, but by using the proper tooling. Printed circuit board cropping should be carried out using a board cropping jig as shown in the following figure or a board cropping apparatus to prevent inducing mechanical stress on the board.</p> <p>(1) Example of a board cropping jig Recommended example: The board should be pushed from the back side, close to the cropping jig so that the board is not bent and the stress applied to the capacitor is compressive. Unrecommended example: If the pushing point is far from the cropping jig and the pushing direction is from the front side of the board, large tensile stress is applied to the capacitor, which may cause cracks.</p> <div style="display: flex; justify-content: space-around;"> <div data-bbox="446 582 750 873"> <p>Outline of jig</p>  </div> <div data-bbox="758 571 1444 840"> <table border="1"> <thead> <tr> <th data-bbox="758 571 1093 638">Recommended</th> <th data-bbox="1093 571 1444 638">Unrecommended</th> </tr> </thead> <tbody> <tr> <td data-bbox="758 638 1093 840">  </td> <td data-bbox="1093 638 1444 840">  </td> </tr> </tbody> </table> </div> </div> <p>(2) Example of a board cropping machine</p> <p>An outline of a printed circuit board cropping machine is shown below. The top and bottom blades are aligned with one another along the lines with the V-grooves on printed circuit board when cropping the board.</p> <p>Unrecommended example: Misalignment of blade position between top and bottom, right and left, or front and rear blades may cause a crack in the capacitor.</p> <div style="display: flex; justify-content: space-around;"> <div data-bbox="550 1164 965 1433"> <p>Outline of machine</p>  </div> <div data-bbox="965 1164 1412 1422"> <p>Principle of operation</p>  </div> </div> <div style="text-align: center; margin: 10px 0;"> <p>Cross-section diagram</p>  </div> <table border="1" style="width: 100%; text-align: center;"> <thead> <tr> <th data-bbox="638 1646 821 1736">Recommended</th> <th colspan="3" data-bbox="821 1646 1348 1691">Unrecommended</th> </tr> <tr> <th></th> <th data-bbox="821 1691 997 1780">Top-bottom misalignment</th> <th data-bbox="997 1691 1173 1780">Left-right misalignment</th> <th data-bbox="1173 1691 1348 1780">Front-rear misalignment</th> </tr> </thead> <tbody> <tr> <td data-bbox="638 1736 821 2083">  </td> <td data-bbox="821 1736 997 2083">  </td> <td data-bbox="997 1736 1173 2083">  </td> <td data-bbox="1173 1736 1348 2083">  </td> </tr> </tbody> </table>	Recommended	Unrecommended			Recommended	Unrecommended				Top-bottom misalignment	Left-right misalignment	Front-rear misalignment

No.	Process	Condition						
9	Handling after chip mounted  Caution	<p>3) When functional check of the P.C.board is performed, check pin pressure tends to be adjusted higher for fear of loose contact. But if the pressure is excessive and bend the P.C.board, it may crack the chip capacitors or peel the terminations off. Please adjust the check pins not to bend the P.C.board.</p> <table border="1" data-bbox="475 371 1433 672"> <thead> <tr> <th data-bbox="475 371 616 434">Item</th> <th data-bbox="616 371 1034 434">Not recommended</th> <th data-bbox="1034 371 1433 434">Recommended</th> </tr> </thead> <tbody> <tr> <td data-bbox="475 434 616 672">Board bending</td> <td data-bbox="616 434 1034 672">  </td> <td data-bbox="1034 434 1433 672">  </td> </tr> </tbody> </table>	Item	Not recommended	Recommended	Board bending		
Item	Not recommended	Recommended						
Board bending								
10	Handling of loose chip capacitors	<p>1) If dropped the chip capacitors may crack. Once dropped do not use it. Especially, the large case sized chip capacitors are tendency to have cracks easily, so please handle with care.</p>  <p style="text-align: center;">Floor</p> <p>2) Piling the P.C.board after mounting for storage or handling, the corner of the P.C. board may hit the chip capacitors of another board to cause crack.</p> 						
11	Capacitance aging	<p>The capacitors (Class 2) have aging in the capacitance. They may not be used in precision time constant circuit. In case of the time constant circuit, the evaluation should be done well.</p>						
12	Estimated life and estimated failure rate of capacitors	<p>As per the estimated life and the estimated failure rate depend on the temperature and the voltage. This can be calculated by the equation described in JEITA RCR-2335C Annex F (Informative) Calculation of the estimated lifetime and the estimated failure rate (Voltage acceleration coefficient : 3 multiplication rule, Temperature acceleration coefficient : 10°C rule)</p> <p>The failure rate can be decreased by reducing the temperature and the voltage but they will not be guaranteed.</p>						

No.	Process	Condition
13	Caution during operation of equipment	<p>1) A capacitor shall not be touched directly with bare hands during operation in order to avoid electric shock. Electric energy held by the capacitor may be discharged through the human body when touched with a bare hand. Even when the equipment is off, a capacitor may stay charged. The capacitor should be handled after being completely discharged using a resistor.</p> <p>2) The terminals of a capacitor shall not be short-circuited by any accidental contact with a conductive object. A capacitor shall not be exposed to a conductive liquid such as an acid or alkali solution. A conductive object or liquid, such as acid and alkali, between the terminals may lead to the breakdown of a capacitor due to short circuit</p> <p>3) Confirm that the environment to which the equipment will be exposed during transportation and operation meets the specified conditions. Do not to use the equipment in the following environments.</p> <p>(1) Environment where a capacitor is splattered with water or oil (2) Environment where a capacitor is exposed to direct sunlight (3) Environment where a capacitor is exposed to Ozone, ultraviolet rays or radiation (4) Environment where a capacitor exposed to corrosive gas(e.g. hydrogen sulfide, sulfur dioxide, chlorine. ammonia gas etc.) (5) Environment where a capacitor exposed to vibration or mechanical shock exceeding the specified limits. (6) Atmosphere change with causes condensation</p>
14	Others  Caution	<p>The product listed in this specification is intended for use in automotive applications under-normal operation and usage conditions.</p> <p>The product is not designed or warranted to meet the requirements of application listed below, whose performance and/or quality requires a more stringent level of safety or reliability, or whose failure, malfunction or defect could cause serious damage to society, person or property. Please understand that we are not responsible for any damage or liability caused by use of the products in any of the applications below or for any other use exceeding the range or conditions set forth in this specification sheet. If you intend to use the products in the applications listed below or if you have special requirements exceeding the range or conditions set forth in this specification, please contact us.</p> <p>(1) Aerospace/Aviation equipment (2) Transportation equipment (electric trains, ships etc.) (3) Medical equipment (Excepting Pharmaceutical Affairs Law classification Class1, 2) (4) Power-generation control equipment (5) Atomic energy-related equipment (6) Seabed equipment (7) Transportation control equipment (8) Public information-processing equipment (9) Military equipment (10) Electric heating apparatus, burning equipment (11) Disaster prevention/crime prevention equipment (12) Safety equipment (13) Other applications that are not considered general-purpose applications</p> <p>When designing your equipment even for general-purpose applications, you are kindly requested to take into consideration securing protection circuit/device or providing backup circuits in your equipment. In addition, although the product listed in this specification is intended for use in automotive applications as described above, it is not prohibited to use for general electronic equipment, whose performance and/or quality doesn't require a more stringent level of safety or reliability, or whose failure, malfunction or defect could not cause serious damage to society, person or property. Therefore, the description of this caution will be applied, when the product is used in general electronic equipment under a normal operation and usage conditions.</p>

13. TAPE PACKAGING SPECIFICATION

1. CONSTRUCTION AND DIMENSION OF TAPING

1-1. Dimensions of carrier tape

Dimensions of plastic tape shall be according to Appendix 3, 4.

1-2. Bulk part and leader of taping

1-3. Dimensions of reel

Dimensions of $\varnothing 178$ reel shall be according to Appendix 5, 6.

Dimensions of $\varnothing 330$ reel shall be according to Appendix 7, 8.

1-4. Structure of taping

2. CHIP QUANTITY

Please refer to detail page on TDK web.

3. PERFORMANCE SPECIFICATIONS

3-1. Fixing peeling strength (top cover tape)

$0.05\text{N} < \text{Peeling strength} < 0.7\text{N}$

3-2. Carrier tape shall be flexible enough to be wound around a minimum radius of 30mm with components in tape.

3-3. The missing of components shall be less than 0.1%

3-4. Components shall not stick to fixing tape.

3-5. When removing the cover tape, there shall not be difficulties by unfitting clearance gap, burrs and crushes of cavities. Also the sprocket holes shall not be covered by absorbing dust into the suction nozzle.

Appendix 3

Plastic Tape

(Unit : mm)

Symbol	A	B	C	D	E	F
Case size						
CGA6 (CC1210)	(2.90)	(3.60)	8.00 ± 0.30 *12.0 ± 0.30	3.50 ± 0.05 *5.50 ± 0.05	1.75 ± 0.10	4.00 ± 0.10
